

CONFIGURE YOUR BUSINESS FOR SUCCESS!

CIS Configurator is an easy to use graphical product and service configurator that is connected with SAGE 300 ERP. Offering CIS Configurator to your clients will allow them to enjoy the following benefits:

- Save time and money by allowing salespeople to configure orders without errors.
- Improve customer service by reducing lead times and incorrect orders.
- Allow quicker response to customer demand.
- Ideally suited to both product and service applications.
- Calculate pricing, costing and materials.
- Generate orders, quotes, estimates, and much more!

CIS Configurator combines web-based accessibility with great control options to create a flexible solution that can readily be expanded to manage quotations for inhouse sales staff, dealers and reseller relationships. Users inside or outside of SAGE 300 ERP can create new quotes, save the subsequent revisions, and then submit the quotation before confirming as an order and adding to SAGE 300 ERP, with all details including configured items generated by the Configurator. As long as your instance of Sage has Inventory Control and Order Entry and the relevant modules to support these, i.e., A/R etc., CIS can create the BOM.
